

PROCESS COOLING
SOLUTIONS

GENERAL

AIR PRODUCTS

Air cooled industrial chillers with Scroll compressors and R410A
refrigerant Cooling capacity 1.71 – 57.5 Tons

*Cooling your industry,
optimizing your process.*

MAXIMUM RELIABILITY, SYSTEM SIMPLIFICATION, ENERGY EFFICIENCY, EXTENSIVE RANGE OF ACCESSORIES AND KITS: THESE ARE SOME OF THE ADVANTAGES OF ACCPS CHILLERS

The ACCPS Series is an air cooled liquid chiller, designed for industrial use and for installation in an indoor or outdoor environments. A broad range of options available in product configuration and accessories in kit form, complete the already loaded standard unit and allows this machine to meet the majority of requirements of industrial applications. The ACCPS Series chiller is therefore the solution for all applications that require high performance, reliability, continuous operation and reduced operating costs.

Standard features

- Refrigerant R410A;
- Hermetic Scroll compressors;
- High-efficiency finned coil evaporator with copper tubes and aluminum fins, installed inside the water storage tank;
- Axial fans with galvanized steel (mod. 015-020) or die-cast aluminum/plastic crescent-shaped blades (mod. 031-802);
- Air-cooled condensers (copper tubes/aluminium fins) fitted on one side of the chiller. Air filter standard from mod. 031;
- Storage tank (design pressure 87 psig) complete with P3 pump, filling/drain valve, pressure gauge;
- Internal hydraulic bypass between the inlet and outlet connections;
- Electronic level sensor with water conductivity function;
- High and low refrigerant pressure switches;
- Refrigerant pressure gauges (mod. 031-802);
- Parametric microprocessor control IC208CX;
- Protection rating: IP54 (mod. 031-802) or IP44 (mod. 015-020);
- Phase monitor against phase loss and phase reversal;
- Compressor crankcase heater.

Main benefits

- Energy efficiency class A;
- Refrigerant R410A is an environmentally friendly fluid (zero ozone depletion potential) and provides high performances due to its outstanding heat conductivity;
- The innovative evaporator-in-tank configuration has been designed specifically for industrial process cooling. It allows a reliable operation with high flow rates and low pressure drops;
- Large cold water tank keeps outlet water temperature consistent even under varying load conditions;
- Scroll compressors ensure high efficiency, excellent performance and elevated energy savings;
- Plug-in solution with integrated pump and tank, perfectly suited to the needs of the industrial User;
- Protection class IP44 (mod. 015-020) and IP54 (mod. 031-802) makes ACCPS units suitable for outdoor installation;
- Extended operating limits: ACCPS units standard allows water inlet temperatures up to 85 °F, and delivers outlet temperatures down to 14 °F. Maximum ambient temperatures up to 114.8 °F (with reduced performance) and minimum ambient temperature down to 23 °F;
- Extensive range of accessories and kits, allow each unit to match the specific customer requirements;
- Cooling circuit suitable both for atmospheric and pressurized hydraulic circuits (up to 85 psig);
- Comprehensive safety equipment, including phase monitor pressure switches, antifreeze sensors, level sensors, crankcase heaters and an internal hydraulic bypass circuit.

Higher energy efficiency

Thanks to the energy efficient scroll compressors, the oversized evaporator and the R410A refrigerant, the ACCPS Chiller achieves leading energy efficiency levels. This is mated to low maintenance needs, ensuring any ACCPS Chiller is a highly economical long-term proposition.

Respect for the Environment

The eco-friendly refrigerant R410A (ODP=0) with outstanding heat conductivity, coupled with the low absorbed power level of the scroll compressors, reduces the environmental impact, minimizing the energy waste. Recyclable and high quality materials ensure respect for the environment, and reduces the carbon footprint.

IC208CX microprocessor control

ACCPS Chiller features a new advanced microprocessor control technology, with all models fitted with a unique IC208CX digital control. A comprehensive digital display allows the user to view and change parameters/settings and monitor alarm readings.

User friendly

The operation principle of the unit is displayed in a simple and intuitive summary sticker with new design. The meaning of the codes of the main alarms shown on the display of the controller are easy to understand, without having to refer back to the instruction manual, thus facilitating the maintenance activities.

The perfect solution, whatever your application

Plastics & rubber: presses, injection moulding, extrusion (sheet & profile), blow moulding, thermoforming, PET.

Lasers, with a specific Laser chiller: cutting, welding, profiling, optics, medical, engraving.

Food & drinks: confectionary, bakeries, distilleries, breweries, wineries, dairies, bottling, carbonation, meat & fish processing, vegetable & salad processing, storage.

Chemical & pharmaceutical: jacketed vessels, polyurethane foam mixers, natural gas, industrial cleaning, laboratories, healthcare, solvents, paints.

Metal working: processing & transformation of precious metals, aluminium working & processing.

Mechanical & Engineering: machine tools, welding machines, rolling mills, presses, extruders, cutting, profiling, polishing, electric spark machinery, hydraulic control unit oil cooling, pneumatic transport, heat treatment.

Paper & related applications: printers, cardboard, labels, plastic film.

Other applications: ceramics, textiles, wood, rental, air compressor cooling, other applications.

Customize to your individual needs...

Main options and kits

The high quality of the standard unit, the wide range of options and kits suitable to develop customized solutions, make ACCPS chillers the ideal choice for every type of industrial cooling application.

- Pump options: No pump, P3 (45 psig), P5 (72 psig);
- Condenser option: version with painted fins against corrosion;
- Version for low environmental temperature 4 °F (mod. 031-802): electrical panel heating, electronic fan speed control
- Soft starter option: factory fitted (mod. 381-802);
- Manual filling tank kit: suitable for atmospheric pressure (mod. 015-802);
- Automatic filling kit: suitable for pressurized hydraulic circuits (up to 85 psig);
- Glycol filling kit: suitable for pressurized fluid circuits;
- Painted condensing coils;
- Simple remote ON/OFF kit (max 500 ft)
- Remote control kit: VICX620 display LED
- Supervisor kits: RS485 ModBus, xWEB300D.
- UL508a Electric Panels

Versions

- Non Ferrous Version (mod. 015-351): stainless steel water tank, copper/brass exchanger, stainless steel pump;
- Dual frequency version (mod. 015-161): 400V/3/50 Hz – 460V/3/60 Hz power supply;
- 50 Hz version (mod. 015-802): 400/3/50 Hz power supply; comply with CE directives; certified by Eurovent.

Internal pump

xWEB300D

Aluminum Mesh Condenser Filters

Copeland ZP Scroll Compressors

Built to perform

High-efficiency evaporator

High-efficiency finned coil exchanger features copper pipes and aluminum fins, shoulders and cabinet made of galvanized steel. The evaporator is installed inside the water storage tank ensuring reduced ambient heat gain and a steady temperature of the process fluid. The process fluid flows in contact with the finned surface, cooled by the refrigerant which evaporates inside the tubes. This particular technical solution allows the ACCPS chiller to operate with high flow rates and reduced pressure drops, ensuring a high level of reliability in heavy industrial applications and also with liquids containing impurities. The heat exchanger is protected from the risk of freezing by a temperature sensor and a control level, by means of which the controller is able to turn the compressors off in case of fault.

Pumps

Centrifugal pumps with seals made of silicon carbide (SiC/SiC/EPDM), available in two different configurations:
Pump P3 - nominal head pressure 43 psig, stainless steel water side mod. 015-251; cast iron mod. 301-802.
Pump P5 - nominal head pressure 12 psig, in stainless steel water side mod. 015-161; cast iron mod. 201-802.
 Dual pumps are available with automatic switching (For models 201-802 only)
NP - No pump

Scroll compressors

Compressors with orbiting scrolls, with 2-pole electric motor, mounted on rubber antivibration dampers and complete with protection against overheating, excessive currents and against high temperature of the exhaust gases. Due to the axial/radial compliance, the low weight of the rotating components and the absence of suction and discharge valves, they offer a series of benefits as a reduced energy consumption, low vibrations, less moving parts and high resistance to liquid refrigerant returns.

Electric panel

The control section is electrically isolated from the power section through a transformer. The power section is fitted with an interlocked door main switch to prevent access while power supply is on. Electrical equipment and electrical panel protection degree IP54. The chiller is tested for electromagnetic compatibility in accordance with applicable EMC standards. A phase monitor standard provides protection against phase loss and phase reversal.

Condensing section

The air-cooled condenser (copper tubes/aluminum fins) is fitted on one side only, reducing space requirements. It has a high working efficiency at high ambient temperatures (115 °F). A condenser aluminum cleanable air filter is standard from model 031.

Structure

Heavy duty structure with galvanized carbon steel panels protected by an epoxy polyester power coating RAL 7035 (base RAL 5013). Due to the configuration of the base, the handling of the unit is easy and secure with a forklift (mod. 015-351) or by lifting bars (mod. 402-802).

Multiple components

Units with 2 compressors (mod. 201-351) ensure a precise step control of the cooling capacity. Models 402-802 are equipped with 4 compressors within 2 circuits, they guarantee maximum efficiency both at full and partial load, featuring compressor rotation and unloading function.

Pressurised fill kit

This kit, is suitable for pressurised hydraulic circuits (up to 87 psig). The pressurised fill kit features all components required for safe and easy operation, including a pressure reducer, water inlet valve, pressure gauge, automatic relief valve, safety valve and expansion tank.

Atmospheric pressure fill kit

This kit is simply installed onto the back of the chiller itself, and features a generous tank with an easy to read water level indication encased within a tough painted steel cabinet. A tap offers easy chiller water tank filling (atmospheric hydraulic circuits).

Remote control options

The following kits allow the remote control of the unit:

- Simple remote control module (ON/OFF, unit status) for installation at up to 500 ft from unit;
- Advanced remote control kits VICX620 and VISOGRAPH VGI890, both with LED display (full control), for installation at up to 500 ft.

Supervisor options

ACCPS units can be linked to various external Supervisor systems:

- RS485 serial connection to an external Supervisor system (MODBUS and other leading systems);
- xWEB300D Supervisor kit, operating via Internet;
- xWEB300D + GPRS modem for remote GSM connection directly to a smartphone.

Maximum control

The large tank and evaporator ensure steady water temperatures, even during sudden load variations. This is further enhanced by passing the water through the evaporator before entering the tank, offering a ready chilled water supply. HP, LP and water pressure gauges (from mod. 031) give a quick overview of status.

Fail-safe operation

ACCPS units always operate in all conditions, thanks to an internal by-pass, phase monitor, wide operating water temperature limits, a 115°F ambient temperature limit, antifreeze protection and an internal water level sensor. The advanced microprocessor ensures fail-safe operation at all times.

Factory test

All models are individually tested to guarantee trouble-free installation out-of-the-box. Each model is wet-tested to verify plumbing integrity of the water circuit and cycled through operation to verify microprocessor and safety device settings. Leading brand components are used throughout, ensuring long term reliability.

Correction factor - Cooling capacity	K4	1	0.99	0.98	0.97	0.96	0.93

(*) Evaporator outlet water temperature being equal

Typical configuration for users suitable for closed circuits

The below diagram shows a typical closed circuit lay-out. Pressurized closed circuit applications (5) always require an expansion vessel. ACCPS units in standard (evaporator in tank) configurations are ideal for such applications, and offer a pressurized automatic fill kit including the expansion tank (as option).

- 1 Accumulation tank
- 2 Pump
- 3 Valve
- 4 Non return valve
- 5 User
- 6 Expansion tank

Typical configuration for users suitable for open circuit

The below diagram shows a typical open circuit lay-out. For atmospheric circuit applications featuring an open tank (4), the water is in contact with the ambient air, as such no expansion vessel is required. Such applications are suited to ACCPS units in standard (evaporator in tank) configuration but without the tank kit and pump, given that the system typically features an external pump (2).

- 1 Accumulation tank
- 2 Pump
- 3 Valve
- 4 Open tank
- 5 User
